### The Association Between Perceived Electronic Health Record Usability and Professional Burnout Among US Physicians

Edward R. Melnick, MD, MHS; Liselotte N. Dyrbye, MD, MHPE; Christine A. Sinsky, MD; Mickey Trockel, MD, PhD; Colin P. West, MD, PhD; Laurence Nedelec, PhD; Michael A. Tutty, PhD; and Tait Shanafelt, MD

#### Abstract

**Objective:** To describe and benchmark physician-perceived electronic health record (EHR) usability as defined by a standardized metric of technology usability and evaluate the association with professional burnout among physicians.

**Participants and Methods:** This cross-sectional survey of US physicians from all specialty disciplines was conducted between October 12, 2017, and March 15, 2018, using the American Medical Association Physician Masterfile. Among the 30,456 invited physicians, 5197 (17.1%) completed surveys. A random 25% (n=1250) of respondents in the primary survey received a subsurvey evaluating EHR usability, and 870 (69.6%) completed it. EHR usability was assessed using the System Usability Scale (SUS; range 0-100). SUS scores were normalized to percentile rankings across more than 1300 previous studies from other industries. Burnout was measured using the Maslach Burnout Inventory.

**Results:** Mean  $\pm$  SD SUS score was  $45.9 \pm 21.9$ . A score of  $\geq 59$  is in the bottom 9% of scores across previous studies and categorized in the "not acceptable" range or with a grade of F. On multivariate analysis adjusting for age, sex, medical specialty, practice setting, hours worked, and number of nights on call weekly, physician-rated EHR usability was independently associated with the odds of burnout with each 1 point more favorable SUS score associated with a 3% lower odds of burnout (odds ratio, 0.97; 95% CI, 0.97-0.98;  $P < .001$ ).

**Conclusion:** The usability of current EHR systems received a grade of F by physician users when evaluated using a standardized metric of technology usability. A strong dose-response relationship between EHR usability and the odds of burnout was observed.

### TROUBLE AT THE TOP: EPIC FACES MOUNTING LAWSUITS AND ALLEGATIONS EVEN AS IT GROWS

BY FORBES | MAY 16, 2025

Epic Systems is perhaps the most successful health technology company in the world. Its electronic health record (EHR) platform is now used by the majority of large health systems in the U.S. Its customers are vocal in their support and are often passionate defenders of the platform's reliability, configurability, and comprehensiveness. And its commercial success continues: according to newly released KLAS Research data, Epic gained even more market share in 2024, widening the gap between itself and competitors.

## THE PAPER VS. DIGITAL DEBATE

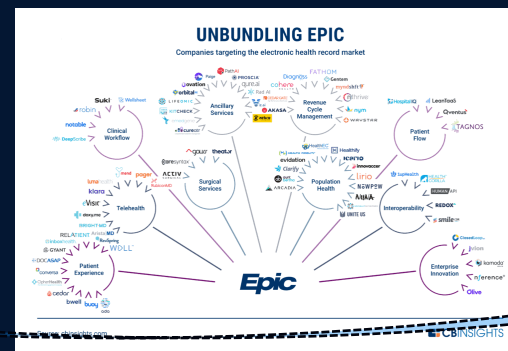

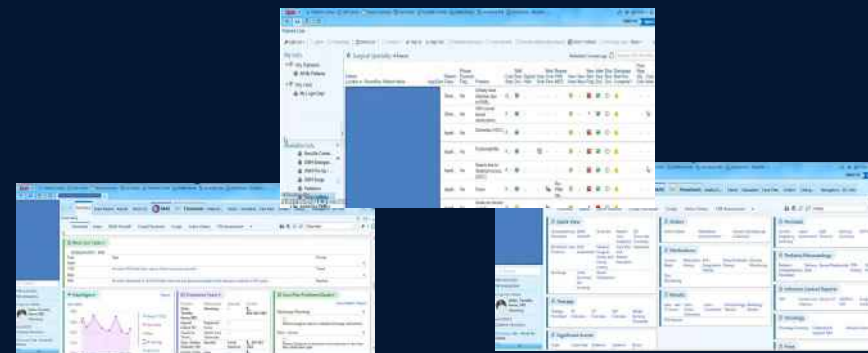

How do electronic medical records really stack up against traditional paper ones?

## ADVICE TO THE PROFESSION: AI SCRIBES IN CLINICAL PRACTICE

Last Updated: June 2024

Artificial intelligence (AI) technology is rapidly evolving and expected to improve health care and the way it is delivered. In particular, the use of AI scribes has the potential to alleviate physician burnout and reduce time spent on clinical documentation. This *Advice to the Profession* document discusses some of the benefits and outlines key considerations physicians should keep in mind when using AI scribes.

#### What is an AI scribe?

An AI scribe is an AI-powered tool that automatically captures and summarizes (and, in some cases, records) clinical encounters between a physician and a patient into detailed medical notes for the physician's review in real-time.

AI scribes can be very helpful in alleviating some of the administrative burdens that physicians face, allowing them to focus on direct patient care while supporting more accurate record-keeping.

#### How does an AI scribe differ from dictation software?

Dictation software simply converts voice to text, while an AI scribe can extract content from what it summarizes and apply it to appropriate fields of the patient's medical record. More recent AI scribes have the capability to analyze and isolate relevant medical information from the conversation between a physician and patient, and create a more concise medical note for the physician's review.

# AI, Trust, and the Human Touch

Why Human-in-the-Loop Is the Future—and Present—for Legal Professionals using AI

Connor Atchison

Co-Founder & CEO, Wisedocs

# Agenda

- 01 Introduction and Background
- 02 Why Legal Is Adopting AI
- 03 AI is Here — But the Humans Are not Leaving
- 04 Human-in-the-Loop (HITL) in AI
- 05 Oversight Matters: Autonomous Vehicles vs. “Autopilot” Aviation
- 06 How to leverage AI in your law firm
- 07 Q&A

# Introduction and Background

# A Personal Story in Legal Claims

I spent 12 years in the Canadian Armed Forces working in healthcare administration, where I witnessed how outdated, manual processes created bottlenecks, not just in care, but in the documentation and legal decisions that followed.

That experience became personal when I became a caregiver for a family member after a catastrophic car accident. Suddenly, I was on the other side, navigating a system filled with paperwork, procedural delays, and long wait times for decisions.

The claim process took more than 18 months to resolve. One of the biggest delays being reviewing hundreds of pages of medical records—an all-too-common challenge for legal professionals managing injury, disability, or tort claims.

That experience inspired Wisedocs: a mission to bring clarity, speed, and automation to legal workflows that are too important to leave fragmented.

There has to be **a better way.**

**Connor Atchison**  
CEO, Wisedocs

# Why Legal Is Adopting AI

# AI Adoption in Legal is Skyrocketing

79%

of legal professionals are now using AI in some capacity in their practice, skyrocketing from just 19% in 2023, reshaping legal work.

From research to document review, AI is transforming efficiency, accuracy, and outcomes across the legal industry, with legal professionals being some of the most enthusiastic adopters.

AI is being used industry wide to help deliver audit-ready, defensible decisions with clear citations, in a fraction of the time.

# Operational Challenges in the Legal Practice

Manual process burden legal teams

Legal staff spend countless hours manually reviewing documents & case files. This tedious process consumes billable hours and diverts attention from higher-value strategy and advisory work.

High turnover disrupts case continuity

With increasing attrition rates, particularly among junior associates rising to 20%. Institutional knowledge is lost in this turnover, causing disruptions in active case handling.

No scalable systems in place to absorb growth.

Firms struggle to grow without automated solutions for document review. Rising caseloads and client demands place increased stress on legal teams, leading to delays & missed expansion opportunities.

Each challenge reinforces the others, locking firms in an inefficient and vicious downward cycle.

# AI is Part of the Solution— but How it's Used is Critical

- 01 The focus now shouldn't be whether to adopt AI, but how to implement it effectively, ensuring AI supports rather than disrupts human expertise.
- 02 AI tailored to industry standards empowers teams by reducing administrative burdens, optimizing workflows, and improving decision-making.
- 03 The rise of AI in law raises significant ethical concerns around transparency, bias, and undermining human roles

# Exploring the Generative AI Legal-Tech Landscape

From contract analysis to case summarization, generative AI is reshaping how legal professionals work. Understand the tools transforming the legal landscape today.

**AI is Here — But the Humans Are Not Leaving**

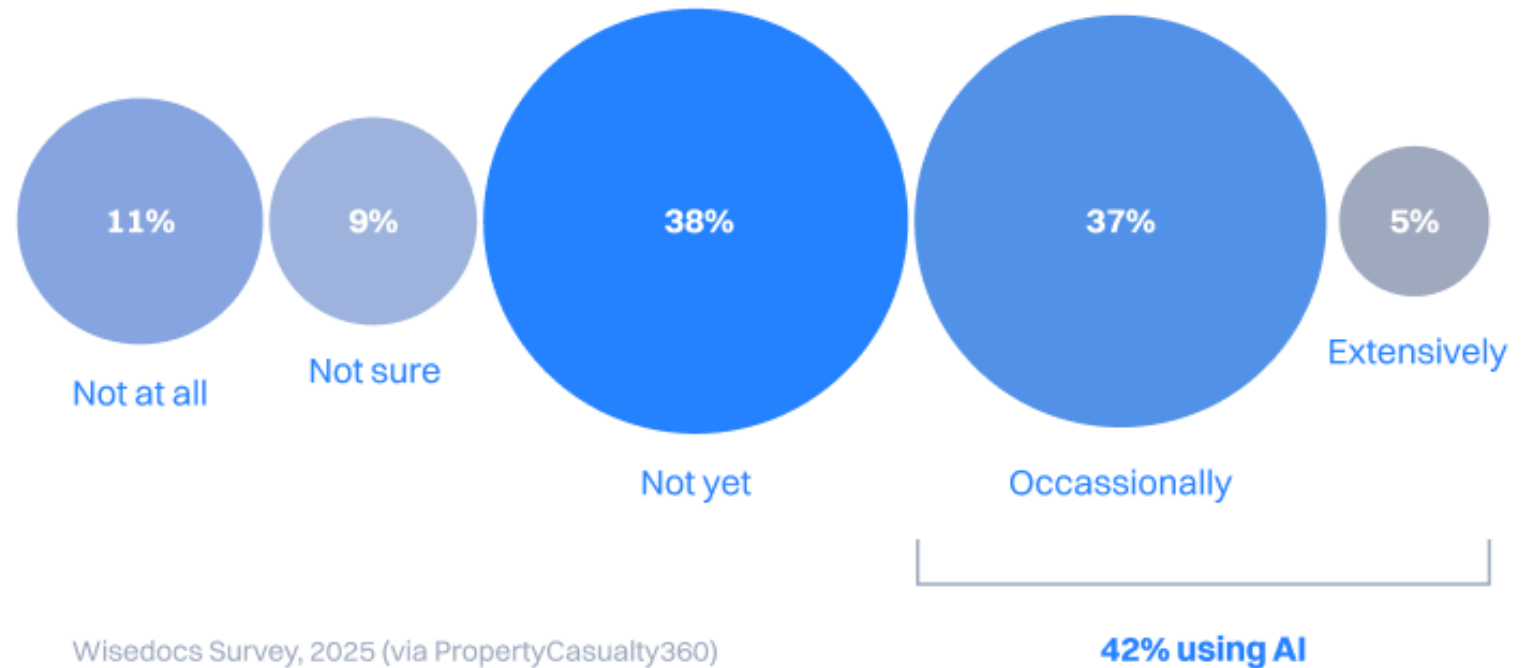

# Early AI Adopters Are Emerging

42% of respondents from a Wisedocs-commissioned survey with PropertyCasualty360 reported to be at least occasionally using AI in their workflows.

Notably, those who use AI tend to trust it more.

33% who "occasionally use AI" selected medium to high trust in AI.

How is AI currently used in your claims document review process?

# Why the Adoption of AI in Claims? The Business Impact

## Top Drivers for Adoption

- Increase capacity & output
- Reduce operating costs
- Enhance customer experience

## How Success is Measured

- Profitability
- Productivity & Efficiency
- Accuracy

**69%** state document automation & data extraction is the top area AI can improve their business

The signals are clear: industry professionals are eager for AI to improve their processes, with the biggest interest in freeing up time rather than replacing expertise.

# AI-Driven Legal Case Analysis

01

**Data In:** Medical records, vast patient history, billing information, legal subpoenas, interrogatories, deposition records etc

02

**Analysis:** Extract meaningful information, identify patterns or inconsistencies, apply evidence-based practices

03

**Data Out:** Integration via API to legal and claims systems

# AI Has a Trust Issue

Despite widespread discussion of AI, trust remains a major barrier to real-world adoption in document review processes.

54%

of industry professionals cite accuracy concerns as the top challenge in adopting AI.

11%

of industry professionals don't use AI and don't plan to.

2%

of industry professionals have high trust in AI-generated output when used alone.

# Trust increases 4x When Humans Validate AI Outputs

Among respondents who expressed a clear opinion, we saw trust in AI jump from 16% to 60% when expert validation was introduced—showing that human validation is the key to unlocking confidence in AI.

Meanwhile, mistrust drops by over 50%.

# Human-in-the-Loop (HITL) in AI

# AI in Claims — Choosing the Right Path

KEY CONSIDERATION	NO AI (MANUAL, TRADITIONAL REVIEW)	AGENTIC AI (FULLY AUTOMATED)	COPILOT AI (AI + HUMAN EXPERTISE)
Compliance	✓ Regulatory alignment: Human-led reviews ensure legal defensibility.	⚠ High risk: AI-generated decisions may lead to fines, disputes, and liability.	✓ Enhanced compliance with oversight: AI + HITL ensures audit-ready decisions & compliance.
Accuracy	⚠ Human fatigue leads to errors: Reviewing thousands of pages manually leads to missed details.	⚠ AI may misinterpret data : strict validation needed to avoid errors, hallucinations, and legal disputes.	✓ Trusted decisions: AI accelerates processing without sacrificing accuracy.
Cost	✗ Expensive & labor-heavy: High cost due to manual reviews.	✓ + ⚠ Low upfront cost, but hidden risks: AI errors increase rework, compliance fines, and litigation costs.	✓ + ⚠ Cost-effective & defensible: Saves money by reducing errors, risk, and legal exposure, but doesn't reduce labor costs to the same degree as automated processes.
Speed	✗ Slow & resource-intensive: Claims take months to resolve.	✓ Fast but unsupervised: AI speeds up processing but may cut corners.	✓ + ⚠ Optimized speed with expert oversight: AI accelerates workflows without compromising compliance but slower than fully automated AI output.
Scalability	✗ Workforce bottlenecks: Overburdened professionals, slow manual scaling.	✓ + ⚠ Scales without guardrails: AI handles high volumes but without safeguards.	✓ Scales responsibly: AI + HITL ensures growth without compliance risks.
THE BOTTOM LINE	Expensive, slow, and outdated. A fading past.	Fast and lowest cost, but risky—errors, hallucinations, compliance issues. An AI utopia.	The best of both worlds—speed, accuracy, compliance, cost effectiveness and expert oversight. A practical reality.

# What Exactly is Human-In-The-Loop?

Human-in-the-Loop (HITL) refers to AI systems that rely on human oversight at key stages — from training and validation to quality control — to ensure outcomes are accurate, compliant, and aligned with real-world context.

3 LEVELS OF HITL IN CLAIMS AND LITIGATIONS

HITL TYPE	WHEN IT HAPPENS	PURPOSE	EXAMPLE
Model Training (Upstream / Pre-Deployment)	Before AI is deployed	Teach AI how to process complex claims & legal documents	Human experts correct AI-extracted medical/legal terminology in training data
Output Validation (Downstream / Post-Deployment)	After AI generates outputs	Ensure accuracy & compliance before delivery	QA team reviews AI-generated medical or legal summaries before sending them to clients
Real-Time HITL (Live Interaction)	While AI is running	Immediate human intervention when AI is uncertain—common in other AI applications, but less common in claims & litigation	AI in claims rarely operates in real time, as legal and insurance workflows prioritize post-processing review over immediate decision-making

# Why Human Oversight is Critical from Start to Finish

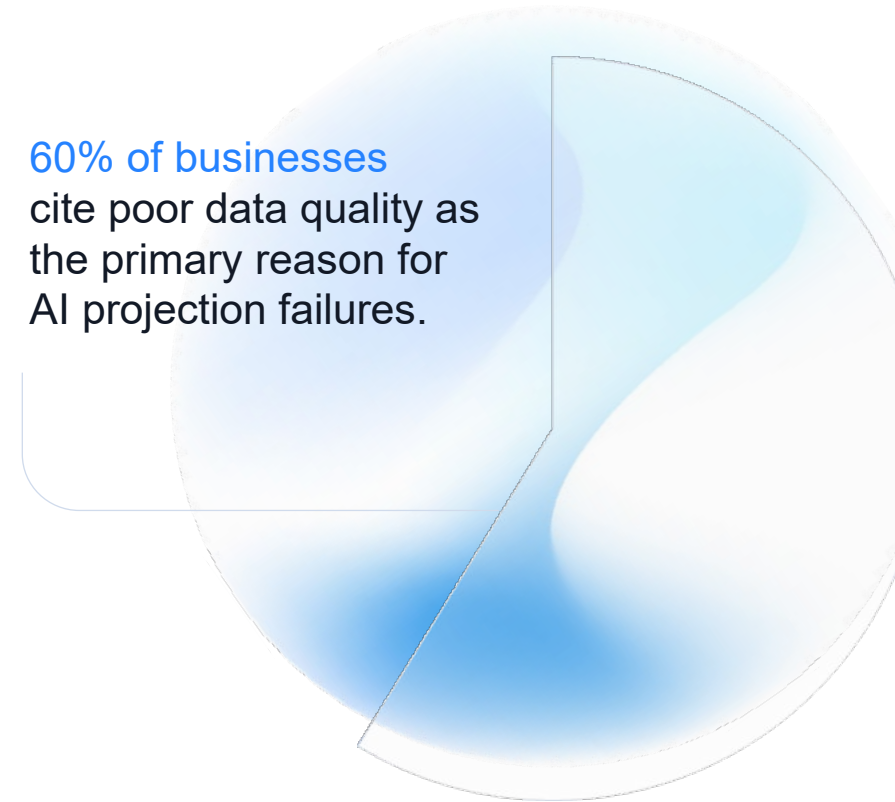

Before AI Can Help, it Has to Be Taught: Generic models don't grasp legal or claims complexity. Quality outcomes start with quality, domain-specific training data.

**Upstream HITL** ensures claims-specific data is reviewed, corrected, and structured before training begins.

AI assists, it doesn't decide: Like an "Autopilot" in aviation, AI can help navigate and reduce the burden — but it's not flying solo. Human expertise keeps decisions grounded in context.

**Downstream HITL** ensures organizations can act on AI insights confidently — without sacrificing accuracy, compliance, or control.

**60% of businesses** cite poor data quality as the primary reason for AI projection failures.

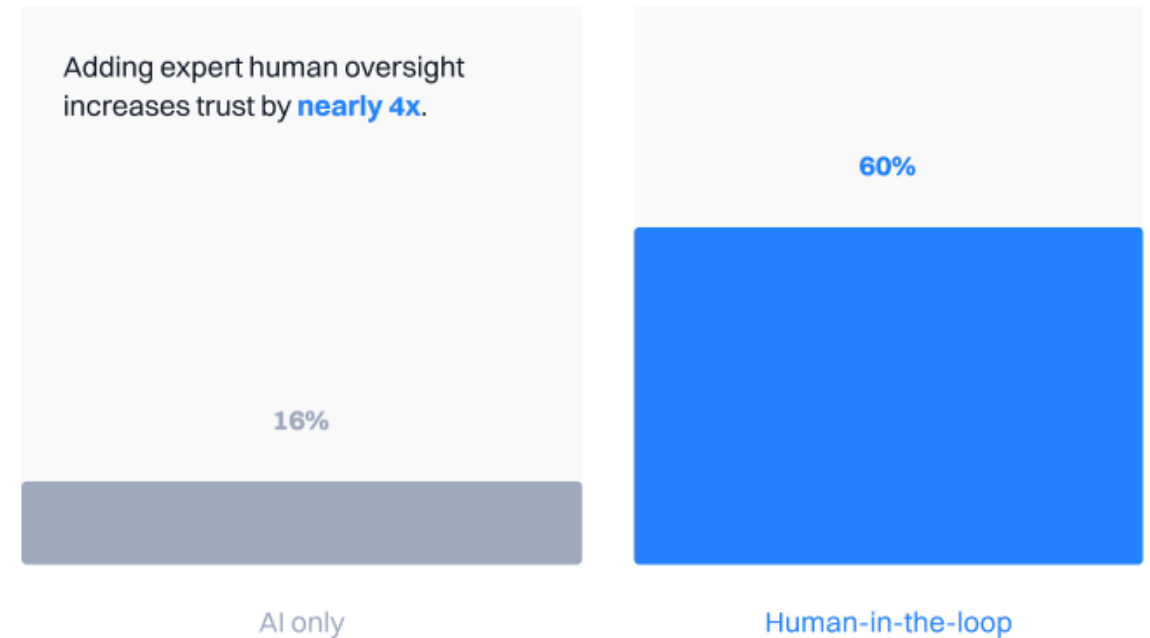

# Human-in-the-Loop is a Trust Multiplier

By combining AI with expert human oversight, organizations can overcome this trust deficit, allowing a greater focus on operational improvements.

- Trust in AI jumps from 16% to 60% when expert reviewers validate AI outputs
- High trust rises from 2% to 22% with human oversight
- Mistrust in AI drops nearly 3x when humans are involved (HITL)

Respondents with “Medium or High” trust in AI:

Wisedocs Survey, 2025 (via PropertyCasualty360)

# Regulators Are Catching Up — And Drawing the Line

North Carolina DOI (24-B-19): Sets insurer guidelines for AI use — transparency, fairness, and oversight required.

Senate Bill 315: Proposes banning AI-only decisions in claims — human review must stay in the loop.

The Message: AI can assist, but can't act alone on high-stakes decisions.

## Implication:

Copilot AI (Human + AI) will quickly become the regulatory default.

# Oversight Matters: Autonomous Vehicles vs. “Autopilot” Aviation

# Tesla's Autonomous Vehicles & Agentic AI: Big Promises, **Harsh Reality**

Elon Musk has long promised full autonomy via "Full Self Driving" (FSD).

Regulators and critics say FSD still requires human attention & intervention.

Numerous lawsuits and fatal crashes have raised concerns about safety.

Tesla's robotaxi ambitions have faced repeated delays.

**2019:** Musk said that within a year there would be a million Teslas on the road capable of acting as robotaxis.

**2025:** Tesla's site currently says, "The currently enabled Autopilot and Full Self-Driving (Supervised) features require active driver supervision and do not make the vehicle autonomous. Full autonomy will be dependent on achieving reliability far in excess of human drivers as demonstrated by billions of miles of experience, as well as regulatory approval, which may take longer in some jurisdiction."

# Autopilot in Aviation: A Model for Responsible AI in Legal

01

## Why it Was Created

Autopilot was introduced to reduce pilot fatigue on long flights and support routine navigation — not to replace pilots.

02

## What it Does (and Doesn't)

Autopilot handles stable flight paths, but pilots still control takeoff, landing, and respond to unexpected events.

03

## Why Pilots Stayed in the Cockpit

Flying is too high-stakes to fully delegate — humans are essential for judgment, accountability, and passenger trust.

04

## The Tie to Legal

Like flying a plane, managing claims and litigation is complex and high-consequence. AI can assist — but expert oversight must stay in the loop.

# Two Possible Interpretations — and How to Choose

## Agentic AI (Robotaxi)

- ✗ No human in vehicle
- 🧠 AI makes real-time decisions alone
- 📶 Risk of confusion in edge cases
- 😬 Public trust still evolving

## Copilot AI (Autopilot in Planes)

- 👨‍✈️ Pilot remains at the controls
- 🤝 AI assists, human makes final call
- ✈️ Trusted for high-complexity tasks
- ✅ Proven & regulated collaboration

Both models have merit — but context matters. Agentic AI can work in controlled environments, but trust and reliability are still evolving. In high-stakes domains like legal, copilot AI — where humans stay in the loop — offers a more proven, accountable approach.

# How to Leverage AI in your Law Firm

# Empowering Your Solution Stack with AI

Use AI tools to supercharge alignment across your solution stack & augment processes.

Learn from platforms like Netflix — multichannel infrastructure works in harmony & offers users optionality.

Embrace the optionality to build, buy, or integrate solutions as needed.

## The Proof is Clear:

The industry is moving fast

61%

Adopting AI into their workflows in 2023

77%

Adopting AI into their workflows in 2024

**AI isn't optional**—it's becoming core to modern document review operations.

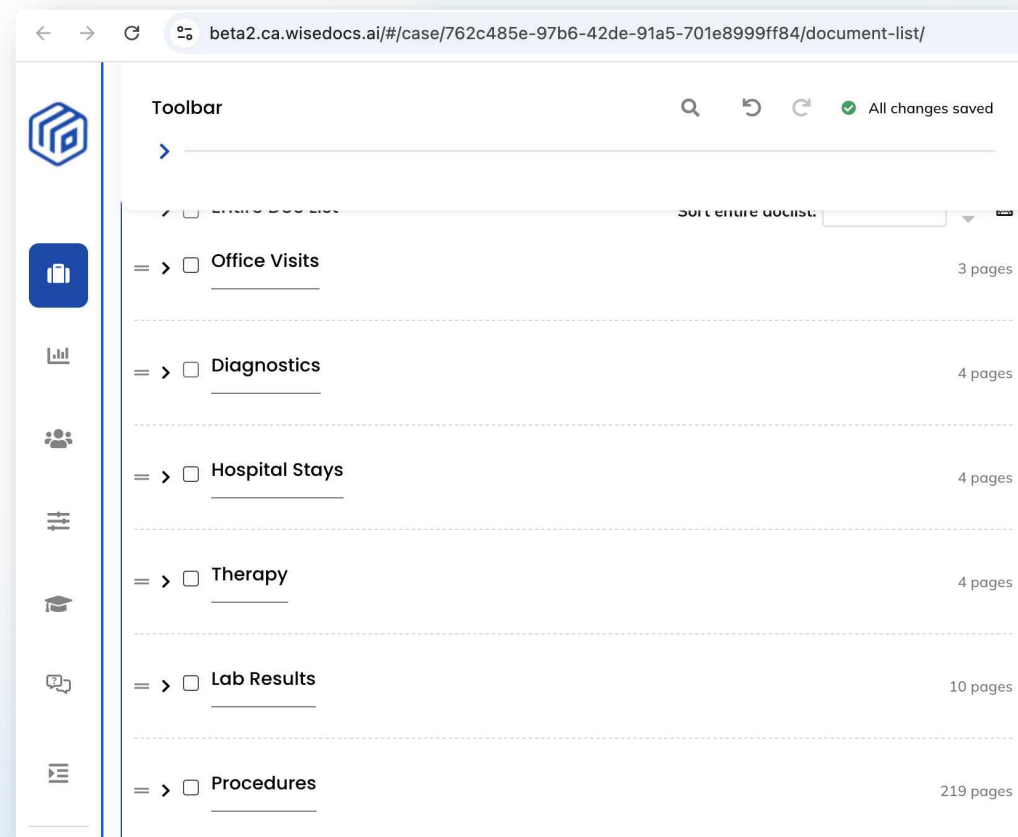

## The Solution

# Chronological Ordering of All Case Information

Wisedocs has a robust document sorting module which allows fully configurable record sorting options that can be customized to legal firm's specialties.

Claim files are automatically organized into chronological, relevant categories — bills, diagnostics, miscellaneous, hospital stays — all fully configurable to match legal workflows.

This structure reflects the legal review process for claims, allowing legal teams to quickly find key insights and reduce time spent on unstructured documents, leading to faster navigation and clearer decision paths.

Auto-organized by medical context.  
Configurable to match a firm's preferred workflows.

## The Solution

# Multi-Level Claim Summarization – From Clinical Detail to Legal Strategy

Wisedocs enables firms to review claims at three critical levels — Document, Claim Activity, and Overall Case — helping teams move seamlessly from granular clinical content to high-level case strategy.

Date	Title	Facility	Author	Doc Type	Pages
May 30, 2017	ED-Attending Supervising Note	Erie County Medical Center Corporation	Ronald Clarke, MD, DO, (Rf)	Emergency	2

HPI: The claimant, a 48-year-old male with no significant past medical history, presented after a motor vehicle accident. He was underneath a vehicle examining the brake system when it was struck by another vehicle at high speed. He did not recall the events of the accident. The claimant denied head pain and neck pain but complained of mid back pain. He also complained of pain to his right knee but denied pain or injury to his other extremities. He denied chest pain, abdominal pain, and shortness of breath. The claimant reported that he was ambulatory on scene after the accident and stated that he felt fine, claiming he could "do 50 pushups right now."

Exam: The claimant was found to be an overweight white male in no acute distress. His head was normocephalic and atraumatic, with pupils equal, round, and reactive to light. External auditory canals were patent, and tympanic membranes were pearly grey with good cone of light. The nose showed no discharge or epistaxis, and oral mucosa was pink and moist. The neck was supple with midline trachea. Cardiovascular exam revealed regular rate and rhythm, with S1 and S2 present, no murmur or rub, and peripheral pulses +2 bilaterally at radial and posterior tibial arteries. Respiratory exam showed normal effort with symmetric chest wall expansion and clear breath sounds bilaterally. The abdomen was soft, nondistended, and nontender, with no palpable masses and normal active bowel sounds. Musculoskeletal examination revealed full voluntary

Additionally, the claimant had a history of low back	

Overall Case

## The Solution

# User Interface and Medical Record Review

Wisedocs' UI is designed specifically for claims legal teams, helping firms effectively process and automate record reviews.

The interface organizes documents into sortable tables with metadata fields like date, author, and document type for easy navigation. Built-in tools remove duplicates, group records, and categorize document types for clarity.

Legal teams can customize export views and filters to meet internal procedures for legal reviews and assist in case strategy.

This streamlined process enhances usability and speed, reducing reviewer fatigue and improving decision-making accuracy for legal teams.

The screenshot displays the Wisedocs interface, which is used for reviewing medical records. The top section features a 'Toolbar' with various icons for document management and a search bar. Below the toolbar, there are tabs for 'Master', 'Medical Records', 'Miscellaneous', 'Duplicates', 'Custom Sort', and 'Example Tables'. The 'Medical Records' tab is active, showing a table with columns for '#', 'Date', 'Title', 'Facility', 'Author', 'Doc Type', and 'Pages'. The table lists a document titled 'Progress Note' from 'Western New York Headache Care' dated 'May 06, 2017'. To the right of the table, a detailed view of the medical record is shown, titled 'HEADACHE CARE'. This view includes patient information, a history of the condition, and a list of symptoms and treatments. The medical record text describes a 48-year-old male patient with persistent headaches, detailing the onset, frequency, and associated symptoms like fatigue and memory loss. It also mentions the patient's history of an auto accident and the impact of the headaches on their daily life.

## The Solution

# Wisedocs Custom Reports

Wisedocs enables firms to populate internal reporting templates using structured data extracted directly from medical records, claims documents, and submitted forms.

The Wisedocs Reports module can be customized for any firm-specific template, using data from human-verified summaries. Each report field is hyperlinked to its source record, ensuring transparency for audits and legal compliance.

Reports are configurable areas of law, such as STD, LTD, and Appeals, aligning with firm specific standards and workflows. This minimizes manual effort, improves documentation consistency, and strengthens the defensibility.

The screenshot displays a web browser window showing a custom report template in Wisedocs. The browser address bar shows the URL: `beta2.ca.wisedocs.ai/#/case/762c485e-97b6-42de-91a5-701e8999ff84/document-list/`. The report is titled "Forum Discussion Guide" and includes a "Purpose of this Forum:" section. Below this is a "Claim Overview:" section with the following details: Job Title: Carpenter, Age: 45, Reason out for work: Motor Accident, Date last worked: May 29, 2017. The "Synopsis" section contains a detailed medical history and diagnosis. The report is generated on June 5, 2025, using the "Forum Discussion Guide" template. A "Regenerate" button is visible at the bottom right of the report content area.

**Forum Discussion Guide**

**Purpose of this Forum:**

**Claim Overview:**  
Job Title: Carpenter  
Age: 45  
Reason out for work: Motor Accident  
Date last worked: May 29, 2017

**Synopsis**  
The patient, a male with no significant prior medical history, worked as a carpenter and flooring installer before sustaining injuries in a motor vehicle accident on May 30, 2017, when another vehicle struck the car he was working on, resulting in loss of consciousness and multiple traumatic injuries. At the scene and in the emergency department, the patient reported back pain, right knee pain, left shoulder pain, and was found to have abrasions, contusions, and swelling in various areas, but initial imaging revealed no acute fractures or dislocations. Over time, the patient developed persistent and worsening neck pain, low back pain, headaches, left shoulder pain, and symptoms of radiculopathy, with associated complaints of numbness, tingling, and functional limitations impacting daily activities and work duties. The patient denied any pre-existing conditions prior to the accident but subsequently developed erectile dysfunction and was diagnosed with mitral valve prolapse. Work history is notable for continued employment as a carpenter and flooring installer, though with increasing difficulty due to pain and physical limitations. The mechanism of injury involved being struck and dragged by a vehicle, with initial injuries including cervical and thoracic spine sprains, concussion without loss of consciousness, left shoulder pain, right knee pain, and multiple soft tissue injuries. Diagnoses confirmed by medical professionals include: sprain of ligaments of cervical spine (ICD-10 S13.4), sprain of ligaments of thoracic spine (ICD-10 S23.3), sprain of ligaments of lumbar spine (ICD-10 S33.5), concussion without loss of consciousness (ICD-10 S06.0X0A), postconcussional syndrome (ICD-10 F07.81), cervicgia (ICD-10 M54.2), low back pain (ICD-10 M54.5), myalgia (ICD-10 M79.1), acute post-traumatic headache (ICD-10 G44.309), dizziness and giddiness (ICD-10 R42), cervical disc herniations at C4-5, C5-6, C6-7 with spondylolisthesis (ICD-10 M50.20, M43.12), lumbar disc herniation at L5-S1 with retrolisthesis (ICD-10 M51.26, M43.17), thoracic disc herniations (ICD-10 M51.24), lumbar radiculitis (ICD-10 M54.16), cervical spondylosis (ICD-10 M47.812), lumbar

# Start with Efficiency and Productivity Gains First

If your organization has adopted or would consider adopting AI for claims document review process, which areas do you believe AI has had or could have the most impact on?

Wisedocs Survey, 2025 (via PropertyCasualty360)  
Note: Up to two selections per respondent allowed

In high-stakes legal industries, adopting AI can feel daunting. But for those ready to integrate AI into their processes, the payoff is clear: greater efficiency and productivity.

Industry professionals are already seeing the benefits—reporting faster processing times and streamlined workflows for processing claims.

Efficiency through speed and resource optimization is widely seen as the most impactful area where AI can transform the claims document review process.

# 3 Steps to Getting Started

## Build Your AI Tech Stack

Explorative AI: Machine learning and neural networks, identify patterns and surface data

Abstractive AI: Natural Language Processing for reading, understanding, and reasoning on complex documents

Large Language Models (LLMs/SLMs): Enable system with abstract thinking and automation

## Right Combinations Matter

There's no silver bullet. To move beyond simple automation to augmented manual processes, you need the right combination of technologies.

Well-structured AI tech stack equips your team with reliable, secure systems for defensible outputs—supporting efficiency without compromising oversight.

## Evolve As the Market Does

This field is evolving rapidly, and so will your needs. Staying competitive means staying current.

Anthropic raised **\$3.5B** to advance its AI systems

Emerging technologies are reshaping how AI is trained, scaled & deployed

# AI is the “Autopilot” Humans Ensure a Safe Landing

## Balancing Automation with Human Expertise

### Human-In-The-Loop

Essential for maintaining precision, security, and liability protection in claims management.

### Striking the Balance

The future of claims management lies in combining automation with human judgment to ensure the best outcomes.

### Safeguarding Decisions

With human oversight, AI can be leveraged to enhance efficiency without compromising accuracy or fairness.

"The benefits are significant, with the potential to transform the way legal professionals deliver value and service to clients...AI can allow professionals to spend time on more innovative and intellectually satisfying practices—the type of work that originally attracted them to the legal profession"
